

2005 RULE PROPOSAL

AS SUBMITTED BY HELMUT BUHL

Leopard Class:

1. Propose harder tires for Leopard. Eg. YHC or same as Rotax.
2. Allow reed screws to be ground for clearance purposes.
3. Allow rebrazing of silencer end cap (1st muffler) due to added stress of U-tube, which this part was never designed for.
4. Allow any 12 volt gel-type battery of the same dimensions and mass to be used.
5. Allow any flex of solid material to be used in place of the stock flex supplied by the manufacturer. There are no specifications from the manufacturer for this part and it should be reclassified as a totally non-tech item, as it was in 2002-2003.
